Home Wi-Fi & Network Assistance

Wi-Fi and network settings made easier.

Why have us do it

- A reliable connection helps every device in the home.
- Guest Wi-Fi can help keep visitor access separate.
- Router settings can be confusing without guidance.
- Small changes can improve security and convenience.

How we'll do it

1. We discuss the router, devices and connection problems.
2. We review existing Wi-Fi and router settings.
3. We configure agreed network and security options.
4. We test connections and explain what we changed.

What we need from you

- Your router details and internet connection.
- Permission to access the relevant router settings.
- A connected computer or phone for testing.
- Approval before any new equipment is purchased.

That's it: we check, configure, test and explain your network.
