# Computer Setup & Optimisation

Make your computer easier, faster and safer to use.

## Why have us do it

- Get a new computer ready for everyday work and home use
- Review programs and settings that slow your computer down
- Have essential software and updates configured correctly
- Understand what was changed and how to maintain it

## How we'll do it

1. We discuss the computer, its condition and what you need
2. We check software, updates and basic security settings
3. We install agreed programs and optimise key settings
4. We test everyday tasks and explain the finished setup

## What we need from you

- Access to your computer, with your permission
- You enter passwords privately where needed
- Details of any programs or licences you already own
- Your approval before paid software or equipment is purchased

**A computer ready to work for you - not against you.**
