VPN & Online Privacy

Browse more privately, with the right settings.

Why have us do it

- Privacy tools can reduce unwanted tracking.
- A VPN can help protect traffic on untrusted networks.
- Browser settings matter as much as the VPN itself.
- We explain what these tools can and cannot protect.

How we'll do it

1. We discuss your devices and privacy concerns.
2. We help choose and install a suitable VPN.
3. We configure browser privacy and related settings.
4. We test connections and show you everyday use.

What we need from you

- Your device and permission to adjust settings.
- A VPN account, if you choose a paid service.
- Access to the browsers you use regularly.
- A few minutes to learn the key controls.

That's it: you tell us what you need, we set it up and check it.
